

Hummer Wind Turbines of Hydraulic Tower System

The hydraulic tower system can be applied in erecting up and lowering down the towers automatically during the installation and maintenances of [wind turbines](#) . By means of this equipment , a crane is saved and the cost of installation and maintenance is reduced greatly .

Furthermore ,the hydraulic equipment can be used repeatedly,more practical and economic , the tower is been hot-dip galvanize and paint coating , can well anticorrosive .

Hummer hydraulic system is classified as electric mode and manual mode . The manual mode is basically used for [H4.6-3000w wind generators](#) and below models , while the electric mode is mainly for [H6.4-5000w wind generators](#) and above models .

The whole system include tower ,tower base,reversing lever ,pipeline , ram , hydraulic pump .For more details , pls contact with us directly .

Add:Room 2904, 5# building , Jindi international city ,No. 88 South of MaAnShan Road ,hefei, Anhui province , China
